NYU | COURANT INSTITUTE SCHOOL OF MATHEMATICS, COMPUTING, AND DATA SCIENCE

Tandon School of Engineering
Syllabus for MA-UY 1124 Calculus II
Fall 2026

Coordinator:
Alekzander Malcom
am12205@nyu.edu

1124 A	Peter Nekrasov	MonWed 8am-9:50am	6MTC 775**B**
1124 B	Hanna Ulman	TueThu 10am-11:50am	2MTC 911
1124 D	Nicholas Spizzirri	TueThu 4pm-5:50pm	2MTC 801
1124 E	Jinghua Qian	MonWed 2pm-3:50pm	2MTC 820
1124 G	Mariya Feklistova	MonWed 12pm-1:50pm	2MTC 811

Course Prerequisites

For MA-UY 1124: a passing grade in MA-UY 1024, or a grade of B or above in MA-UY 1324.

Course Description

This course covers techniques of integration, introduction to ordinary differential equations, improper integrals, numerical methods of integration, applications of integration, sequences, series, power series, approximations of functions via Taylor polynomials, Taylor series, functions of two variables, graphs of functions of two variables.

Required Materials

The required material for this course will be delivered to you digitally through a link in your course site.

Through the Follett ACCESS program you will have a **12 month subscription to Cengage Unlimited** which includes the book and platform for this course. The cost of the platform is $193.00, which will be added as a "book charge" to your bursar bill.

Please note that, during the year that your subscription is active, your Cengage Unlimited subscription covers all titles and platforms for any other course you take that uses Cengage books and platforms. This means that, if you already have an active Cengage Unlimited account, you will be able to use it for this course and will not incur an additional charge.

If you choose to purchase your course materials elsewhere, you must login here to the student portal and **opt out of the program by September 17th**. If you do not opt out by this date, you will be charged. (Note: if you opt out you will lose access to Cengage Unlimited platform after the opt out period closes.)

***Please note - if you took a class where Cengage Unlimited was provided in the ACCESS program last semester there is no need to opt out. You have a 12 month subscription, you will not have to pay again if you paid on your bursar account in the Fall.**

Learning Outcomes

By the end of the course students should be able to:

- Understand the concept of an integral and its applications.
- Integrate elementary functions.
- Use integration to compute area, volume, arclength, work, etc.
- Determine convergence or divergence of sequences and series.
- Analyze functions expressed as a power series.

Course Structure

This course consists of lectures as well as discussions regarding exercises and problems similar to those from the textbook and the online homework. There will be a two exams during the semester, WebAssign homework, written problem sets, quizzes, and a final exam.

Time Expectations

Success in this course is based on the expectation that you will devote sufficient time working on the course material both in class and outside of class. This includes actively participating in class, completing activities and tasks, reviewing lecture notes and graded work, reading the textbook, working on the homework assignments, and studying for exams. According to New York State Regulations, the total learning time for each *semester-credit* is 45 hours (15 hours of instruction and 30 hours of student work/study outside of class). This course has been designed to comply with New York State Regulations; thus, you are expected to spend two hours completing course work and studying outside of class each week for each hour that you are scheduled to spend in class. In MA-UY 1124, the generic week has four scheduled hours of classtime, so the average student should spend around **eight hours** outside of class **each week** on this course.

Recommended Textbook

The book Calculus: Early Transcendentals, 8th edition, by James Stewart will be used throughout the course. We will follow the notation and the WebAssign will be based off of Stewart. No physical textbook is required for the course, but you are encouraged to read the ebook, which is **included with your WebAssign access**.

Attendance

Class participation and attendance are an important part of the course. Attendance is expected of all students (on time). Not surprisingly, research confirms that students who attend class regularly do better! Please come to class prepared and ready to contribute. This includes asking questions, answering questions, and engaging with classmates and/or with the material and tasks. If you are unable to attend, it is your responsibility to keep apace of the course.

Calculator

No calculators will be allowed for exams. For homework, you may need a calculator.

Online Homework

For each class day, there will be an assignment administered through the online homework system, WebAssign. These will be due on Fridays. ***There will be no extensions on these assignments.*** Start early! We will drop the lowest three grades at the end of the semester.

Quizzes

There will be weekly quizzes usually covering material prior to the current week's topics. These will take place during the last class day of the week (after Week 1), will usually be one or two questions, and will be returned to you via Gradescope. Your first quiz will be a differentiation quiz, which will be longer than the remaining quizzes.

Problem Sets

There will be written problem sets due throughout the semester. The purpose of problem sets is to give you experience with how the class's topics frequently arise in context: they are more vague and sometimes longer than WebAssign questions. Additionally, problem sets may explore topics in greater detail than is appropriate for an exam. You are encouraged to work together on these assignments, but each individual submission must be your own. Students will upload submissions using Gradescope. **After the deadline, *you will not be able to submit the problem set.***

Proper formatting of submissions is necessary to receive credit. Instructions for proper submission can be found on Gradescope's help page.

Exams

There will be two midterm exams and a final exam. The two midterms will occur during the common exam hour on Tuesdays 12:30pm-1:50pm.

- Exam 1 Tuesday, October 6th, 2026
- Exam 2 Tuesday, November 10th, 2026
- Final Exam, TBD (when Tandon decides this, you will be able to see the info in Albert)

Exam Policies

- Students will be allowed **a maximum of one make-up exam** throughout the entire semester per course for an excused reason listed below. There will be no remote makeup exams: All make-up exams must be taken in-person and must be taken **within one week** of the original exam date.
- If you miss an exam for a medical, religious, or family emergency reason, you must contact the Math Department at soe.math@nyu.edu in order to request a make-up exam **within two days** of the missed exam. Makeups will not be granted to students who do not notify the Math Department in a timely manner. For medical, religious, or family emergency reasons, in order to qualify for a makeup exam, you would need to be approved for an excused absence for the date of the exam by Tandon Student Affairs. **Excused absence requests must be submitted as soon as posible and no later than 2 days after the original in-class exam date by completing the form here and must list the exam as a missed assignment**.
- You may request permission for an out-of-sequence exam or final, if you are giving an official presentation or organizing an official session at a suitable out-of-town ACADEMIC conference that directly conflicts with the time of the exam. If you wish to do so, please send an email to soe.math@nyu.edu BEFORE you finalize your travel plans. Permission is not guaranteed. In particular, no accommodation will be made at all for non-academic conferences or for students going to a conference only as an attendee.
- We cannot accommodate out-of-sequence exams, quizzes, and finals for reasons of convenient travel, even if you have already purchased tickets. Please note carefully the date of your exams and final and plan your travel schedule accordingly.

- If you are a student athlete who has an exam conflict for reasons other than practice, please email a letter from NYU Athletics to soe.math@nyu.edu to request a make-up exam **at least three days** prior to the date of the exam.

Grading Policy

Your course score will be determined according to the first table. We will convert this score to a letter grade based on the second table.

Item	Weight
WebAssign	4%
Problem Sets	4%
Quizzes	12%
Exam 1	25%*
Exam 2	25%*
Final Exam	30%
Total	**100%**

Grade Range	Letter Grade
[94,∞)	A
[90,94)	A−
[87,90)	B+
[83,87)	B
[80,83)	B−
[77,80)	C+
[73,77)	C
[70,73)	C−
[65,70)	D+
[60,65)	D
($-\infty$,60)	F

*Your lower midterm exam grade will be replaced with your final exam grade, if the final exam grade is higher. A grade of 0 given for a missed exam may only be replaced with approval. A grade of 0 which is given for a violation of Academic Integrity cannot be replaced.

Midterm Progress Reports

We know timely and actionable feedback is vital for student learning and success. After the midterm exam, you will receive a Midterm Progress Report through NYU Connect. The report will let you know if your progress is strong, satisfactory, or of concern. Strong Progress in this course means you're doing well and are consistently and regularly participating in classroom or online discussions, as well as completing your weekly assignments on time. Satisfactory Progress in this course means you're doing well but there's room to grow and are sometimes participating in classroom or online discussion, as well as completing most of your weekly assignments. Concerns About Progress in this course means your professor has concerns about your performance, attendance, or other challenges, such as not participating in classroom or online discussions, regularly missing or doing very poorly on submitted assignments, and/or having multiple absences.

Math Tutoring

See this website for announcements about exam review sessions. Students looking for additional assistance outside of the classroom are advised to consider working with a peer tutor through Knack. NYU has partnered with Knack to provide students with free access to verified peer tutors who have previously received an A or A- in this course. To view available tutors, visit nyu.joinknack.com and sign in with your NYU email.

The Office of Student Advocacy

At NYU Tandon, we recognize that medical, mental health, or personal issues can sometimes affect your attendance and academic performance. If you are experiencing challenges that you feel are impacting your ability to attend class or succeed in your coursework, we encourage you to reach out to the **NYU Tandon Office of Student Advocacy**. The Student Advocacy team is here to connect you with the resources and support you need to address these challenges and ensure you can continue to thrive academically. If you begin experiencing any issues that may affect your attendance or academic performance, please reach out to the **NYU Tandon**

Office of Student Advocacy as soon as possible as we will be unable to appropriately address these concerns as the semester progresses, so early communication is essential to ensure the support and resources you need. The **NYU Tandon Office of Student Advocacy** can be reached at advocacy.tandonstudentlife@nyu.edu and is located in 5 MetroTech Center LC240.

Inclusion

The NYU Tandon School values an inclusive and equitable environment for all our students. I hope to foster a sense of community in this class and consider it a place where individuals of all backgrounds, beliefs, ethnicities, national origins, gender identities, sexual orientations, religious and political affiliations, and abilities will be treated with respect. It is my intent that all students' learning needs be addressed, and that the diversity that students bring to this class be viewed as a resource, strength and benefit. If this standard is not being upheld, please feel free to speak with me.

Student Accessibility

New York University is committed to providing equal educational opportunity and participation for all students. The Moses Center for Student Accessibility and Inclusive Culture (CSA) works with NYU students to determine and implement appropriate and reasonable accommodations as well as access available programs and resources to support equal access to a world-class education. Students who are requesting academic accommodations are advised to reach out to the Moses Center as early as possible in the semester for timely assistance.

Academic Honesty

The Department of Mathematics reserves the right to impose the strongest academic sanctions for violations of Academic Integrity. Students are responsible for familiarizing themselves with Tandon's Student Code of Conduct including the Policies and Procedures on Academic Misconduct.

Definition: Academic dishonesty may include misrepresentation, deception, dishonesty, or any act of falsification committed by a student to influence a grade or other academic evaluation. Academic dishonesty also includes intentionally damaging the academic work of others or assisting other students in acts of dishonesty. Common examples of academically dishonest behavior include, but are not limited to, the following:

- Cheating: intentionally using or attempting to use unauthorized notes, books, electronic media, or electronic communications in an exam; talking with fellow students or looking at another person's work during an exam; submitting work prepared in advance for an in-class examination; having someone take an exam for you or taking an exam for someone else; violating other rules governing the administration of examinations.
- Fabrication: including, but not limited to, falsifying experimental data and/or citations.
- Plagiarism: intentionally or knowingly representing the words or ideas of another as one's own in any academic exercise; failure to attribute direct quotations, paraphrases, or borrowed facts or information.
- Unauthorized collaboration: working together on work that was meant to be done individually.
- Duplicating work: presenting for grading the same work for more than one project or in more than one class, unless express and prior permission has been received from the course instructor(s) or research adviser involved.
- Forgery: altering any academic document, including, but not limited to, academic records, admissions materials, or medical excuses.

In the case of an Academic Integrity violation on an exam, the grade of zero cannot be replaced.
